

Machine Learning Basics

Supervised Learning

Supervised learning is a type of machine learning where the model is trained on labeled data. Each training example includes input features and the correct output. The model learns to predict outputs from inputs.

Unsupervised Learning

Unsupervised learning is a type of machine learning that works with data that has no labels. It tries to find hidden patterns or groupings in the input data.

Reinforcement Learning

Reinforcement learning involves training an agent to take actions in an environment to maximize cumulative reward. It learns from trial and error through rewards and penalties.
